# Acknowledgements

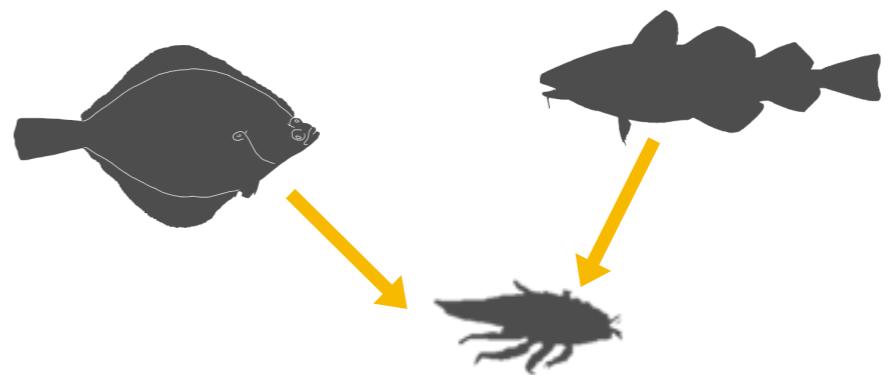

- Co-authors Michele Casini, Sean Anderson, Mayya Gogina
- Alessandro Orio for help with data standardisation
- People involved in data collection
- Grant (Bentfish) from the Swedish Research council FORMAS

# Proposed causes

- Competition for benthic resources
- Spatial mismatch with pelagic prey
- Lack of right-sized pelagic prey
- Direct effects of oxygen

# Working questions

- Which variables are related to condition and how strongly?
- How has diets of cod changed over time?

# Condition & density data

- Condition of individual  $i$  at spatial location  $s$  at time  $t$
- Density of cod in haul  $i$  at spatial location  $s$  at time  $t$
- Prey weight in individual  $i$  at spatial location  $s$  at time  $t$

# Approach

- Spatiotemporal data rich in ecological information, but come with particular features:
- Data closer in space are more similar
- Covariates can account for some of this dependence, but not all

# Condition & density models

- Spatial and spatiotemporal Gaussian random fields
- Student-t distribution for condition | Tweedie for CPUE and stomach

$$E(y_{s,t}) = \mu_{s,t}$$

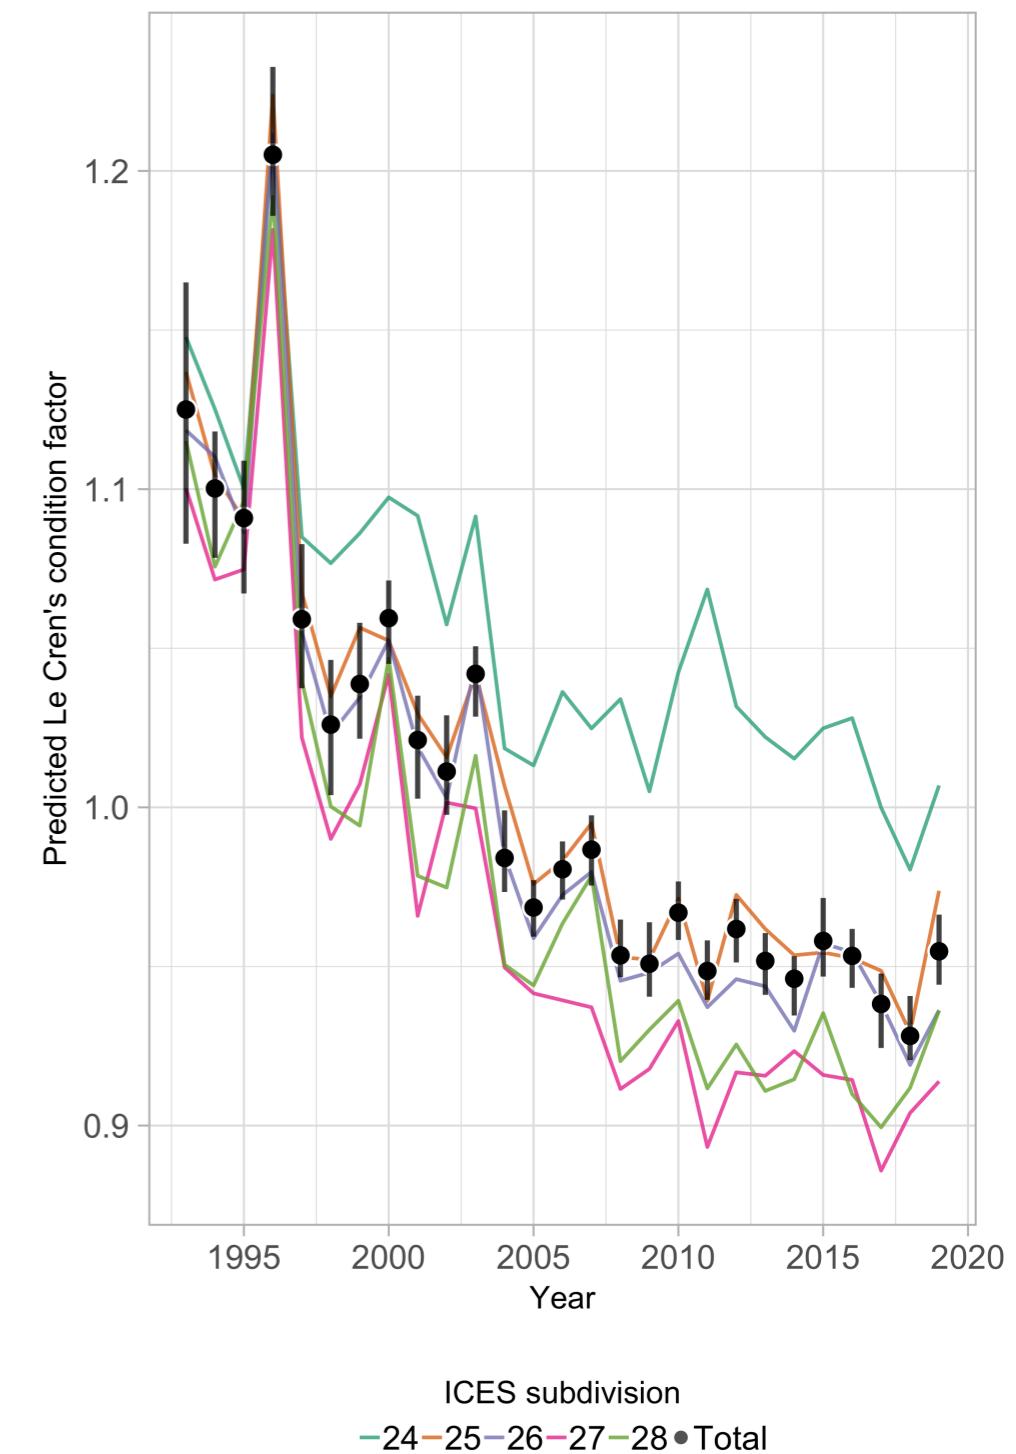

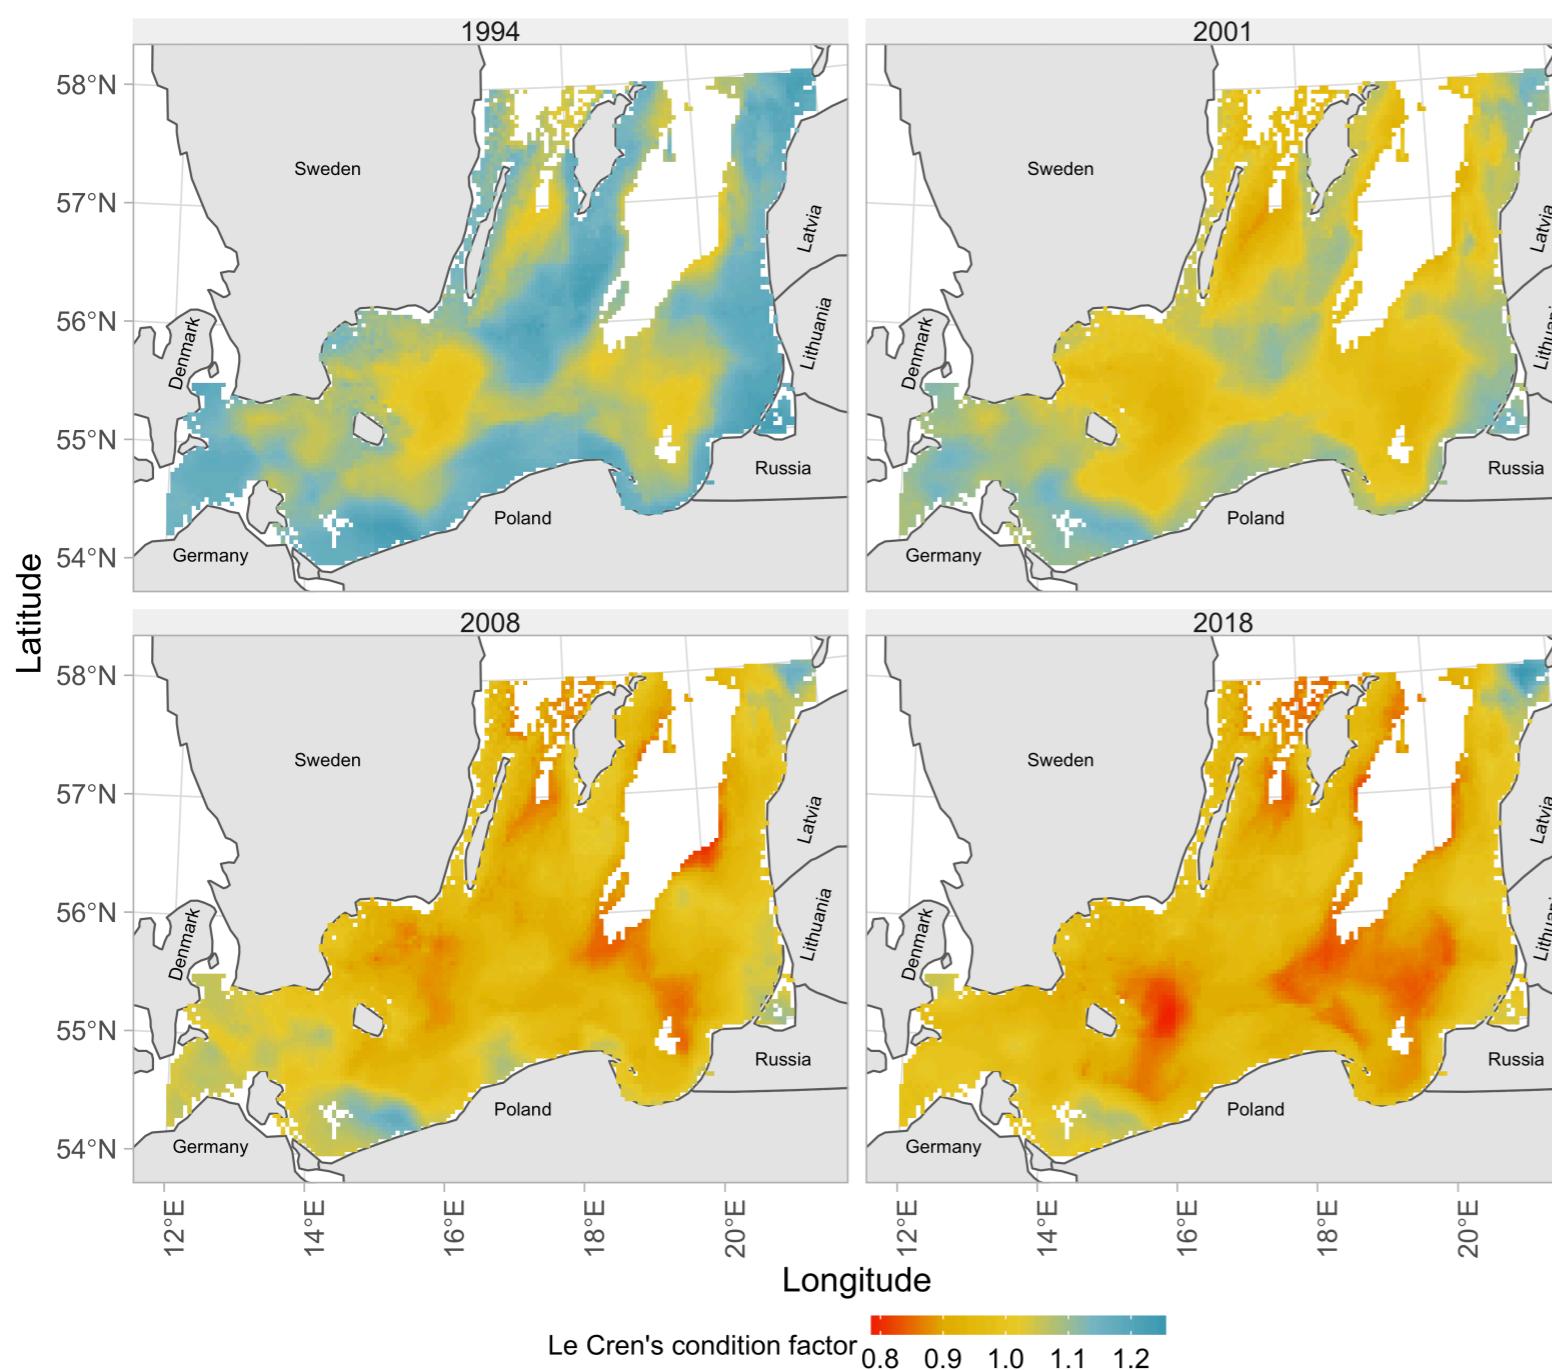

$$\mu_{s,t} = f^{-1}(X\beta + \omega_s + \epsilon_{s,t})$$

$$\omega \sim \text{MVNormal}(0, \Sigma_\omega)$$

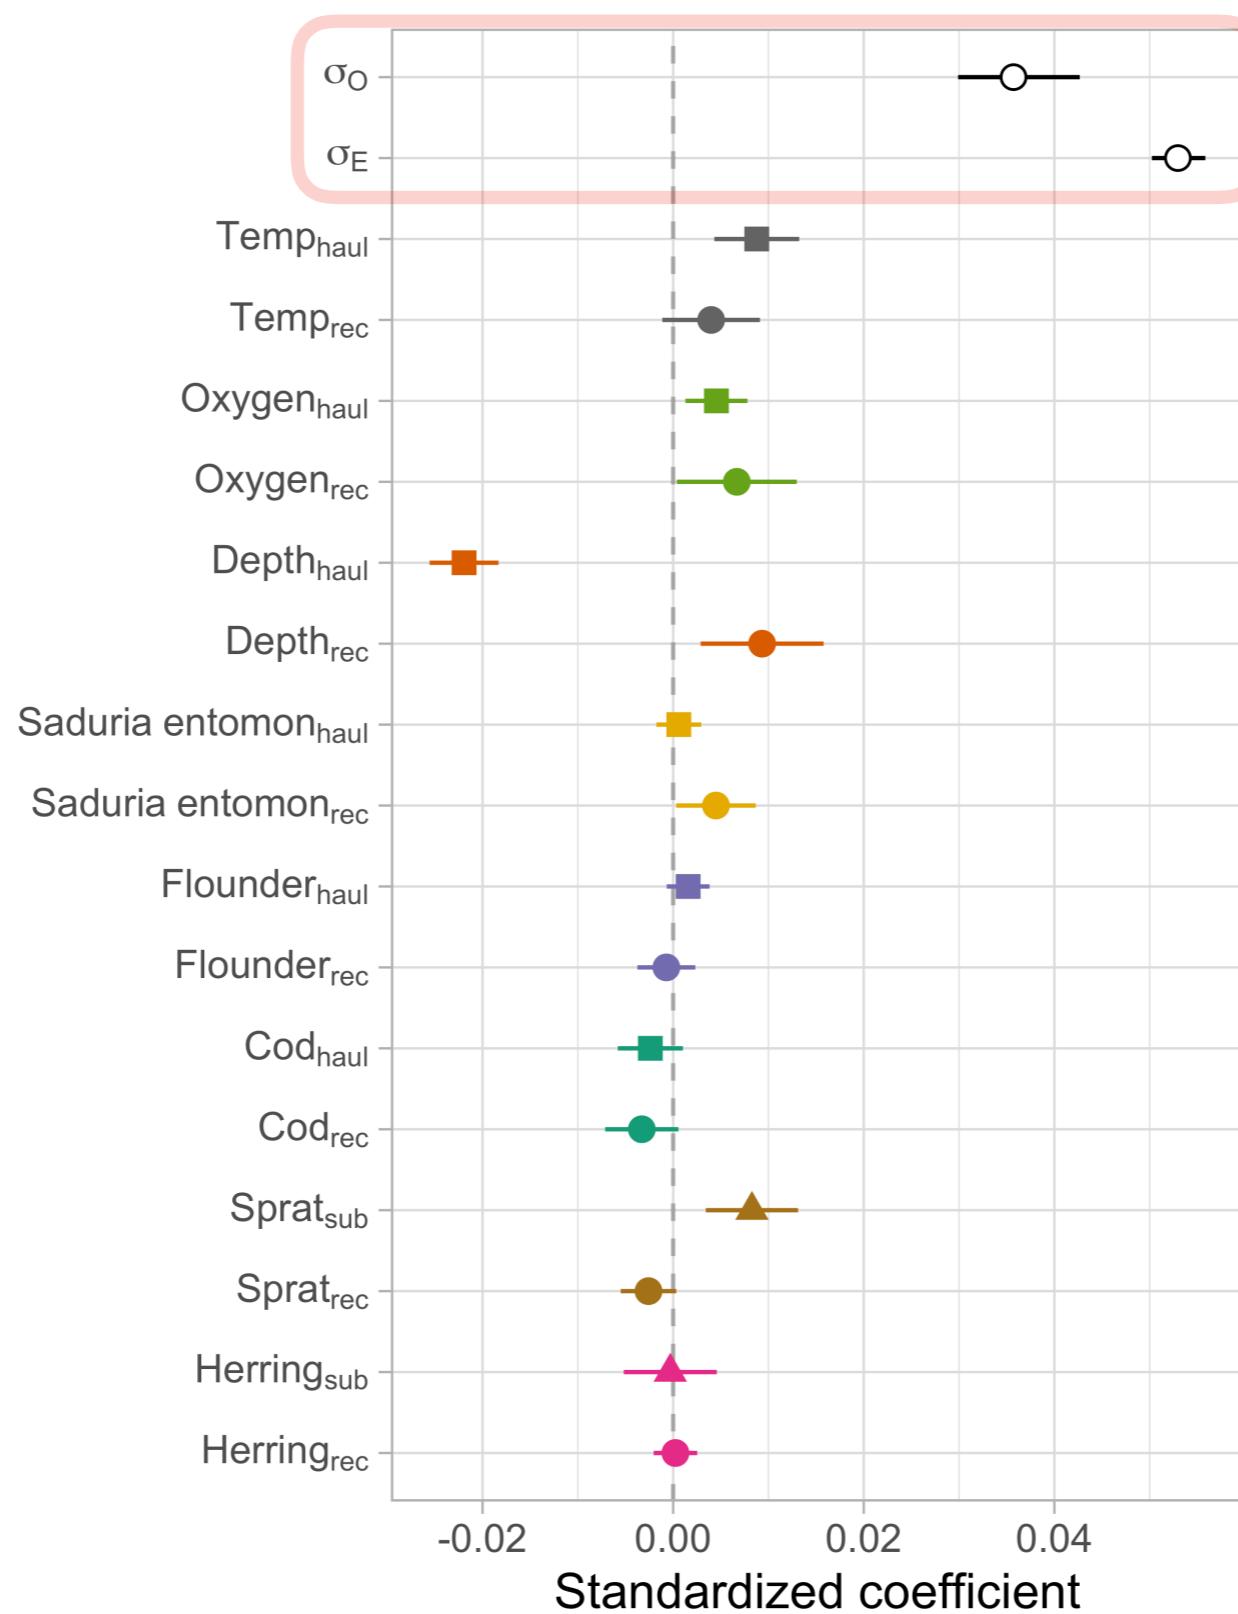

$$\epsilon_t \sim \text{MVNormal}(0, \Sigma_\epsilon)$$

1. Spatiotemporal condition  
& distribution model
2. Historical feeding

# Condition declines in the whole southern Baltic

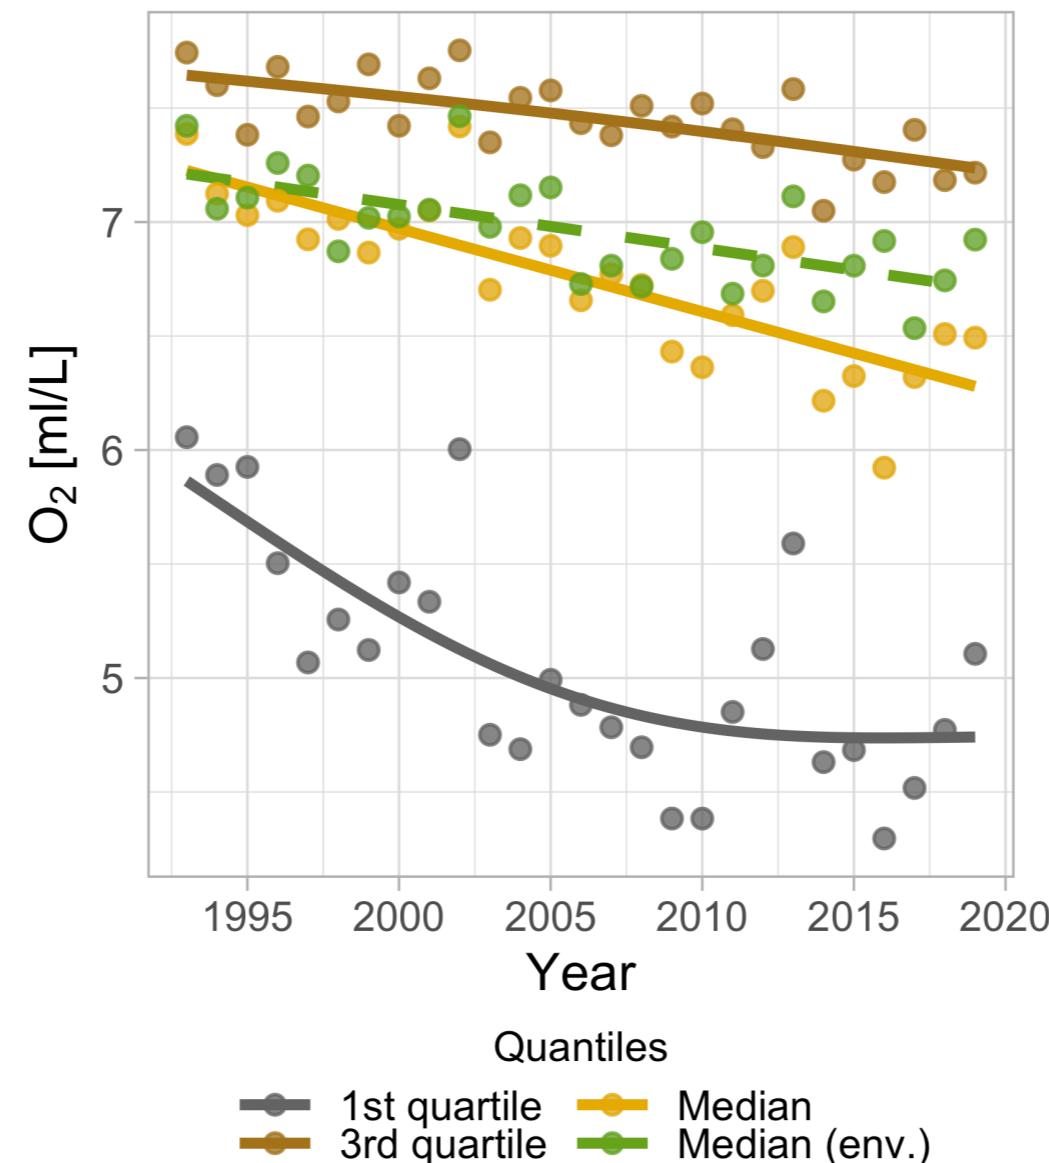

# Larger magnitude of residual spatiotemporal variation than covariates

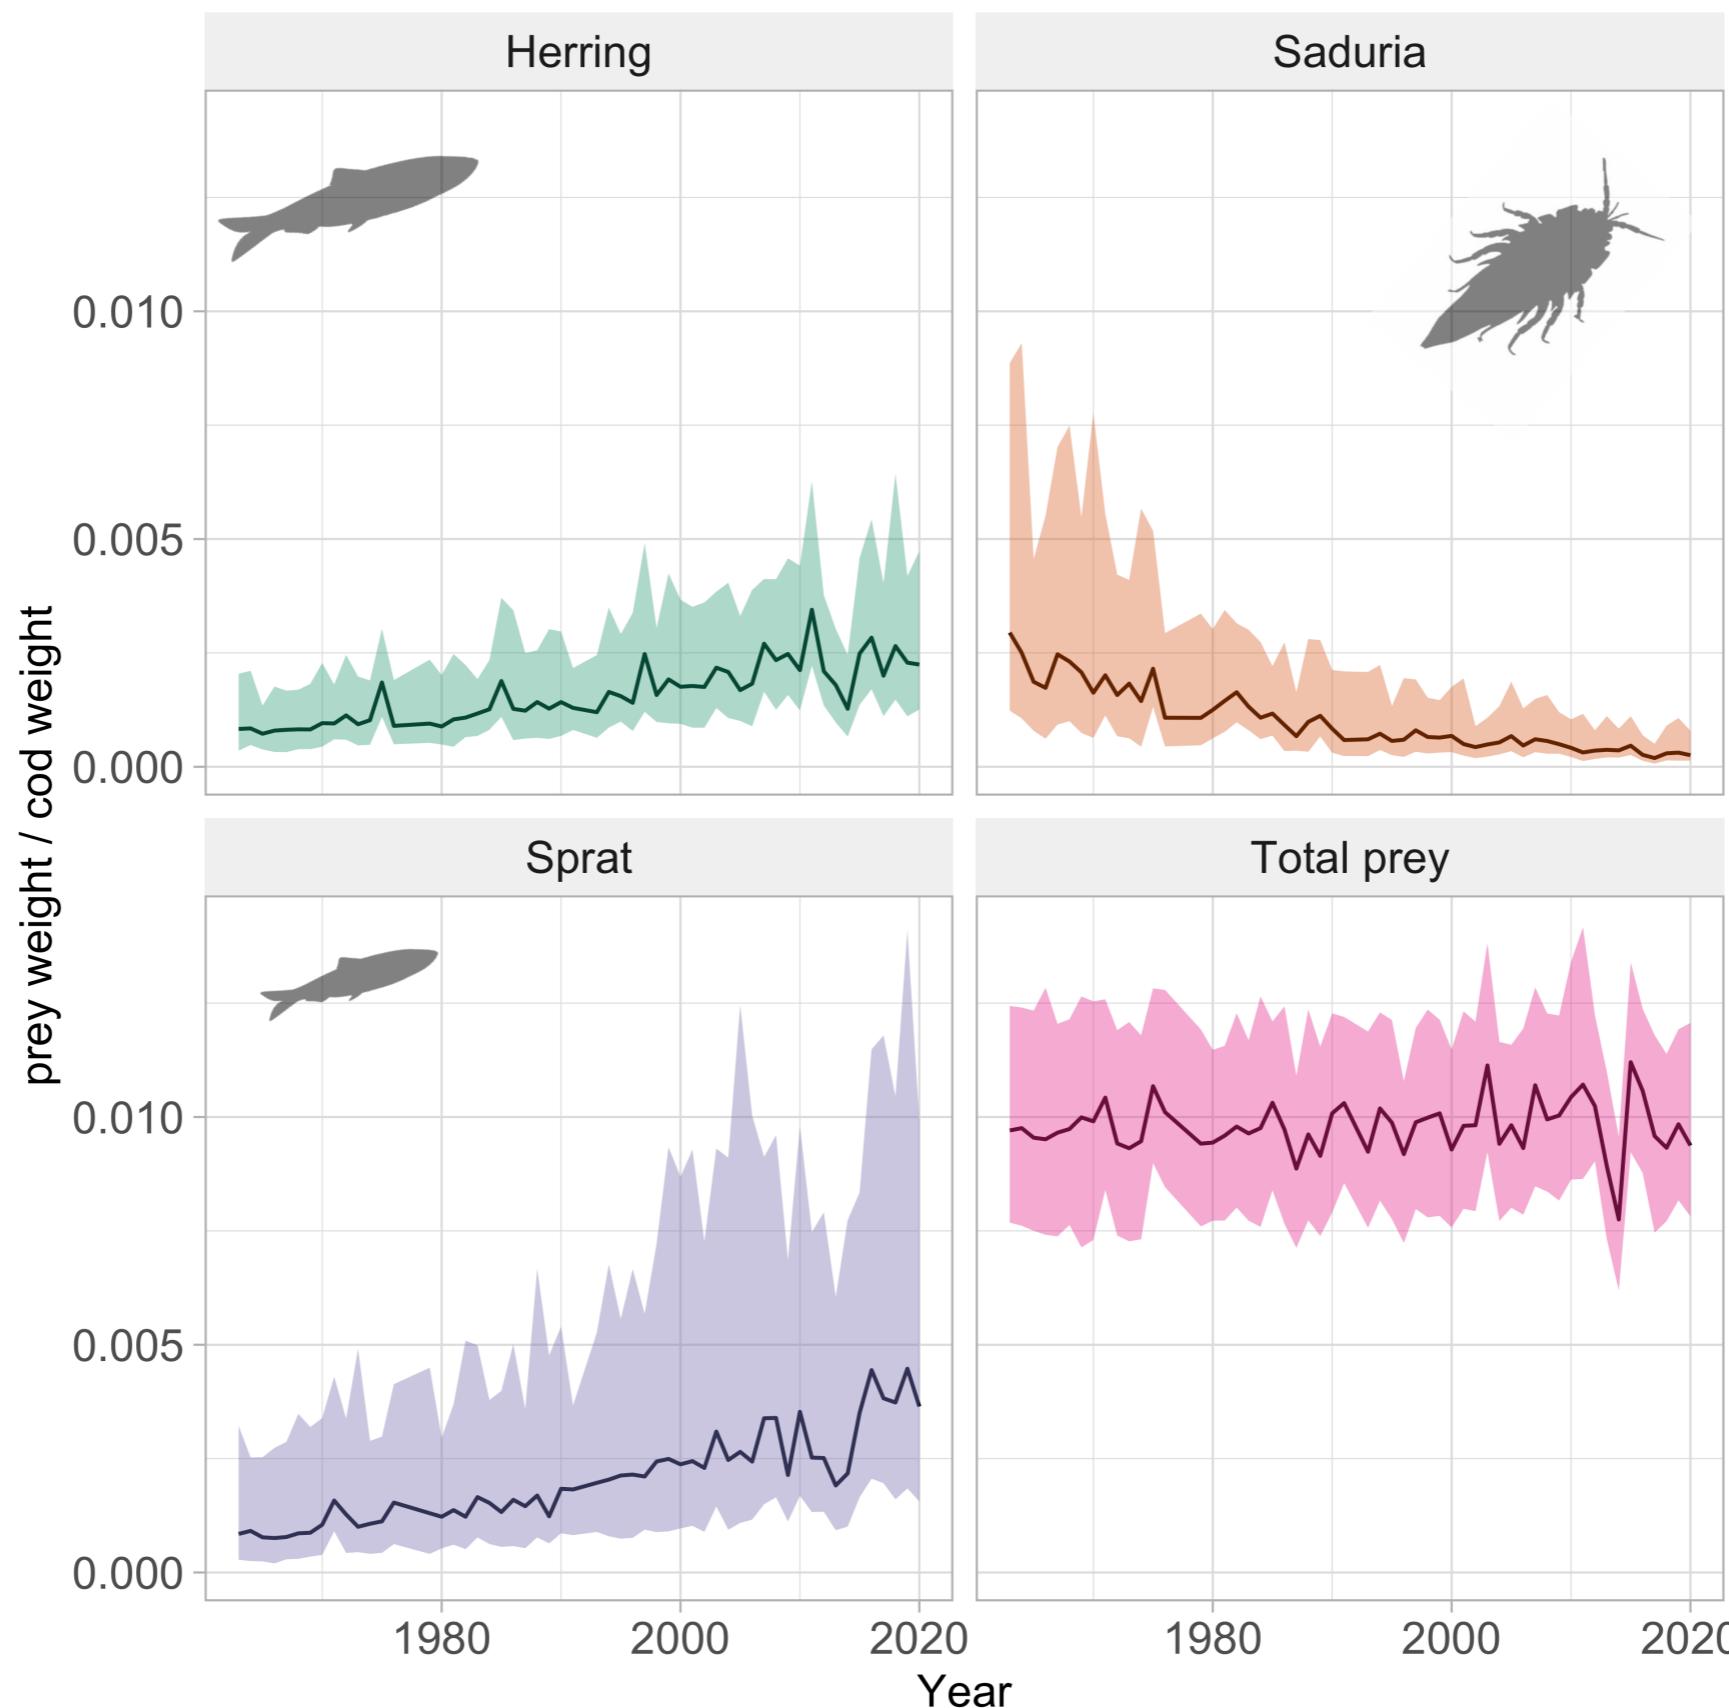

- Haul      ○ Spatial/spatiotemporal s.d.
- Rectangle    ▲ Sub-division

# Oxygen positively related to condition, but cod experience high oxygen on average...

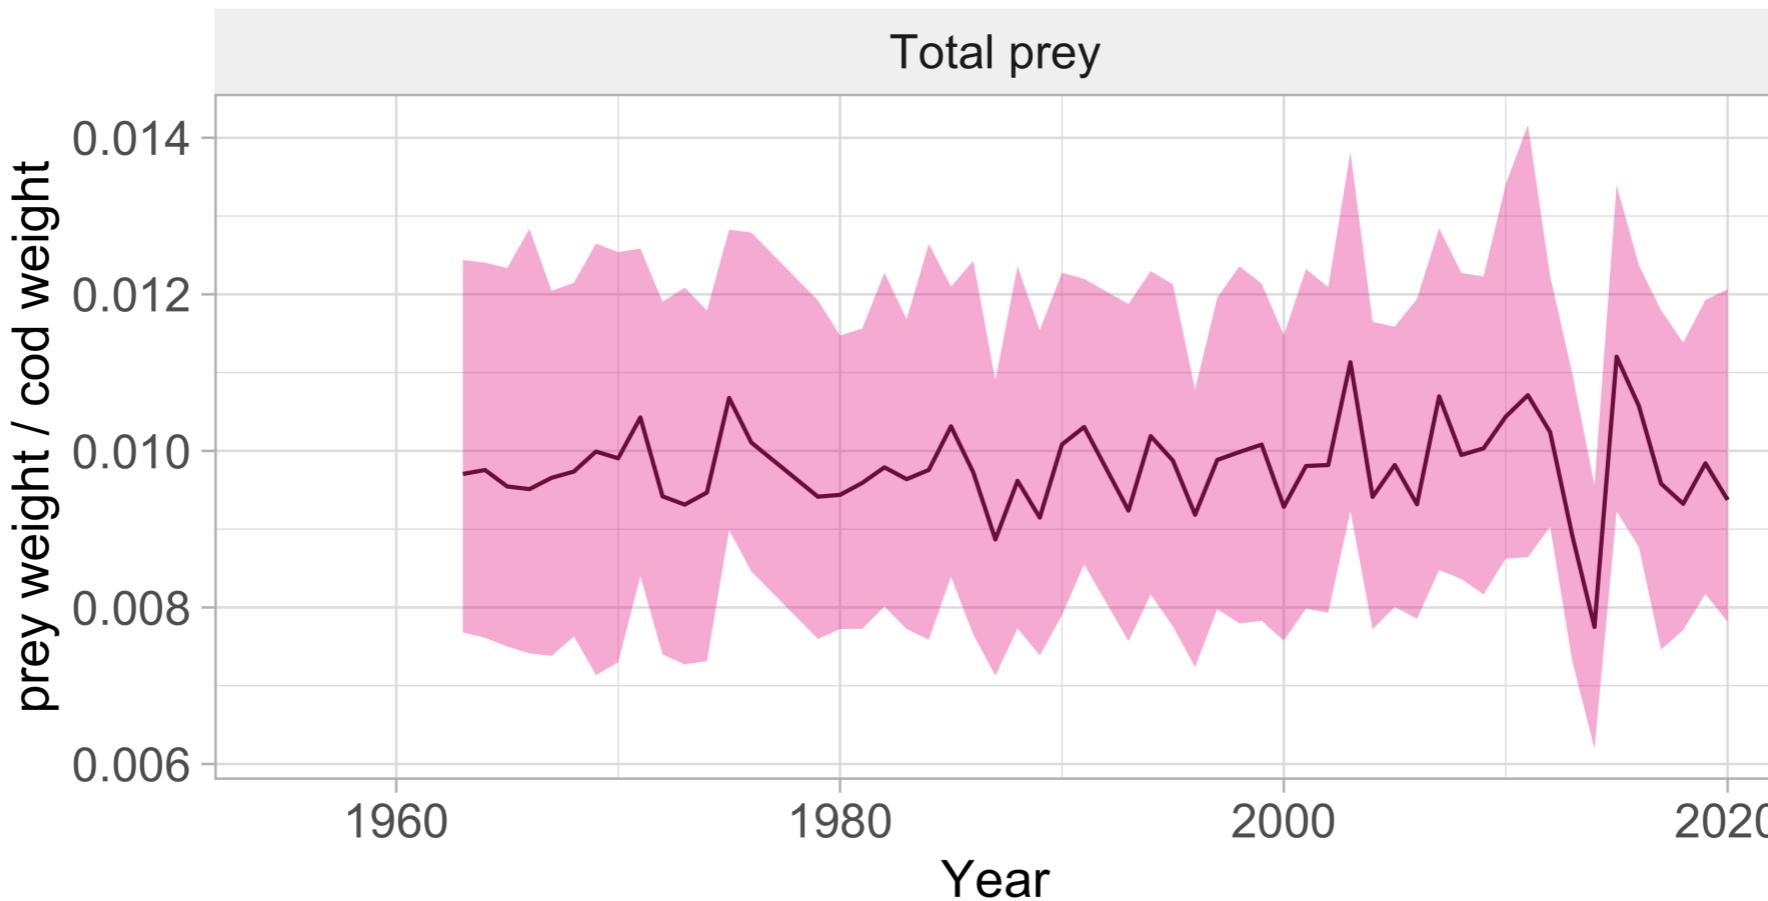

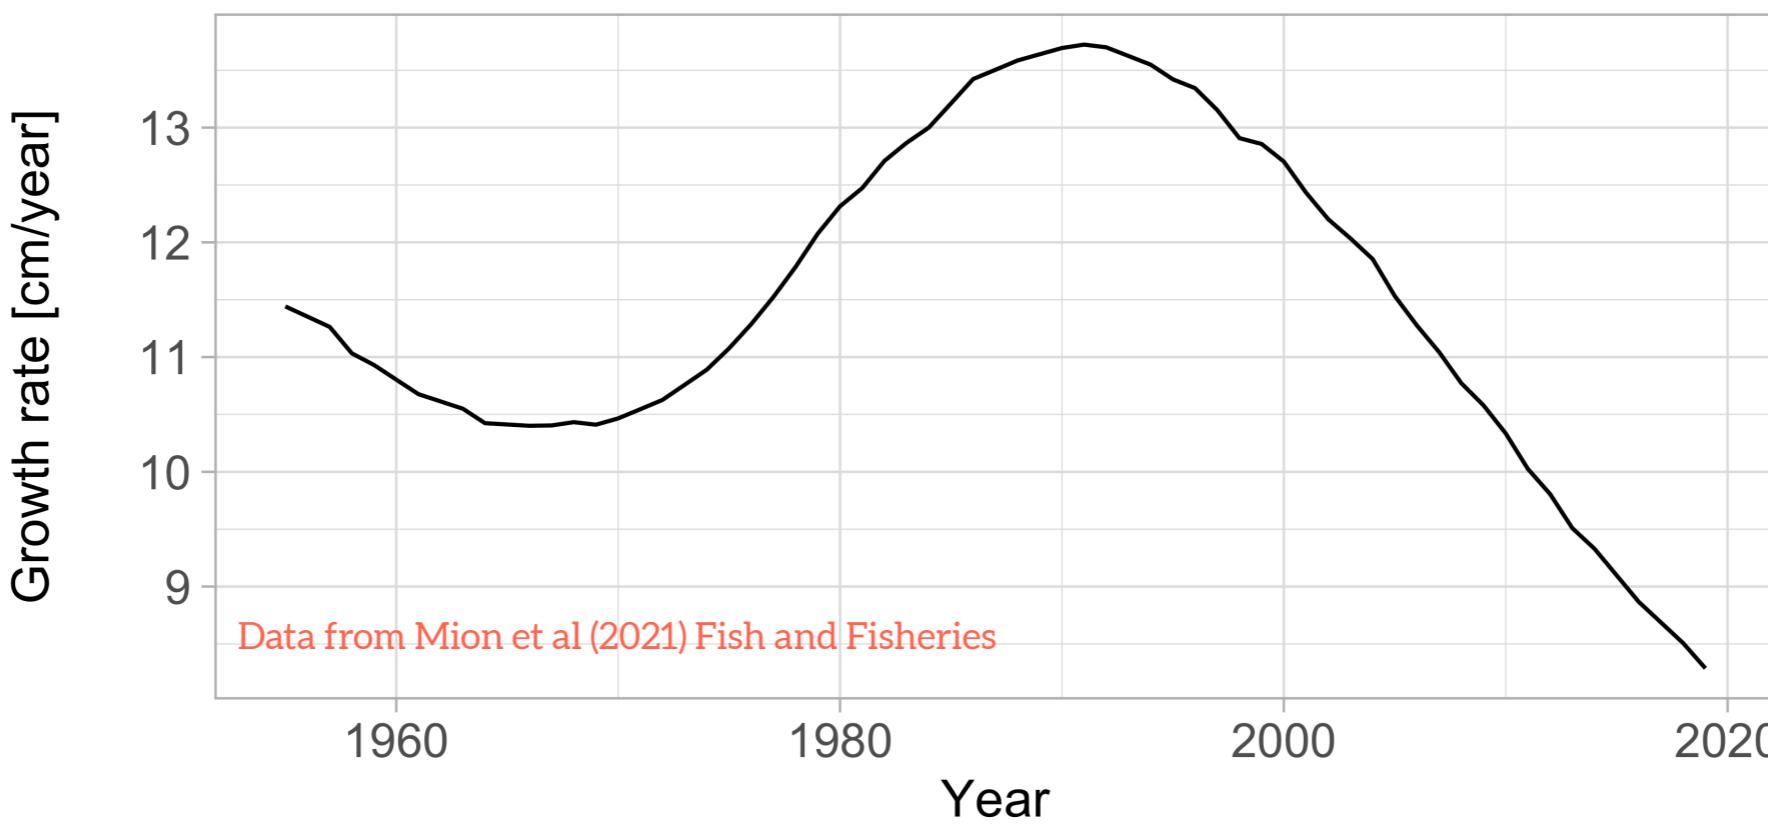

1. Spatiotemporal condition  
& distribution model
2. Historical feeding

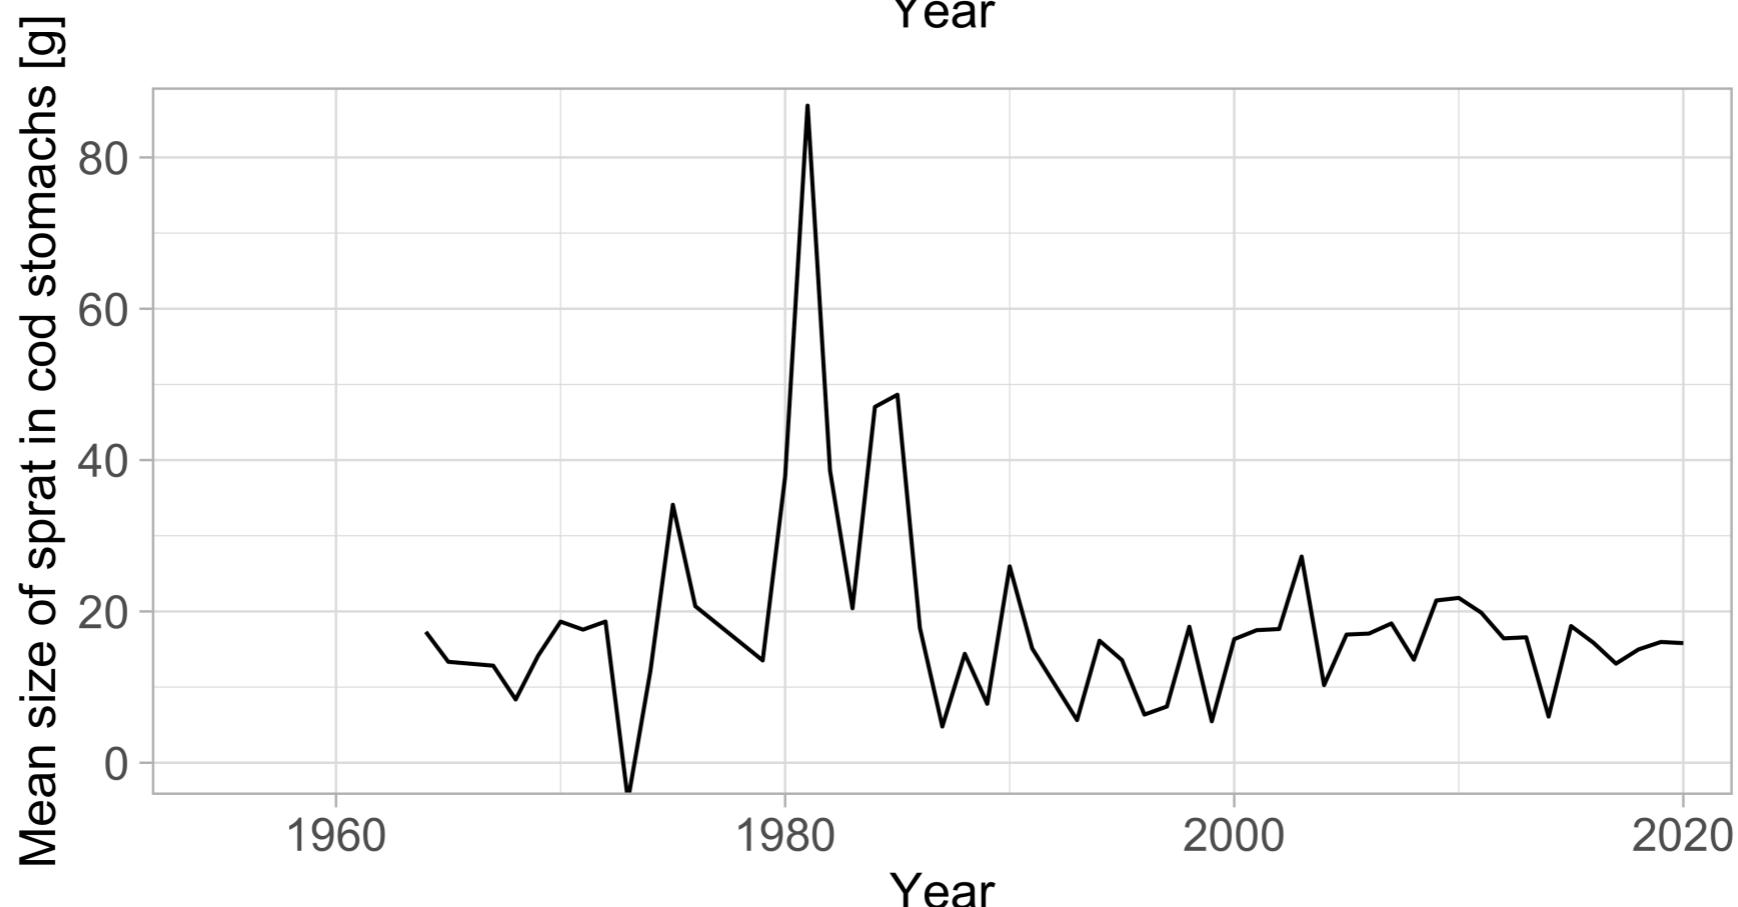

# Pelagic species ↑, benthic ↓, but total prey remains stable...

# But growth trends are unimodal...

# Sprat size in stomachs peaks in 80's before growth outburst

# Summary & outlook

# Summary & outlook

- Small effects of covariates, latent spatial processes important!
- Weight of food in stomach unchanged over time despite drastic changes in growth
- Important to evaluate broader changes in diet over long time scales & think about reference state

# Thank you for listening!
